Education

University of Petroleum and Energy Studies (UPES), Dehradun	2023 - 2027
B.Tech, Computer Science & Engineering (Full Stack AI)	CGPA: 8.3/10
Senior Secondary (XII), CBSE Secondary (X), CBSE	2022 2020
75% 91.6%	

Technical Skills

Languages: JavaScript, Python, Java, C, SQL
Front-End: React.js, React Native - component architecture, protected routing, role-based UI
Back-End: Node.js, Express.js - REST API design, JWT authentication, RBAC middleware
AI / GenAI: RAG pipelines, LangChain, LangGraph, Vector Search & Embeddings, Prompt Engineering, NLP sentiment analysis
Databases & Caching: MongoDB (aggregation, indexing, query optimisation), SQL, Redis
Tools & Platforms: Git, Docker, Postman, Cloudinary, Figma, npm, Agile/Scrum

Internship Experience

Xebia, Remote	Jun 2026 – July 2026
Backend Developer Intern	
- Backend developer on a 6 - member team building the Question & Exam module of an AI-proctored examination platform, delivered through structured Agile sprints across a 24-member, 4-team program. - Own API contract design, relational schema modelling (ER diagrams), and Dockerised backend services, coordinating interface changes with dependent teams to keep integrations unblocked.	
Teal Feed, Gurugram	Jun 2025 – Jul 2025
Software Engineer Intern	
- Sole front-end owner of a 3-role marketplace (User / Tasker / Admin): designed and shipped every role-based React dashboard within a 6-week sprint cycle, removing the need for a planned contractor engagement. - Standardised Node.js/Express REST endpoints (authentication, task CRUD, bidding) into a consistent API contract, cutting QA-reported integration bugs in the final sprint. - Awarded a Letter of Recommendation for on-schedule delivery of all assigned features and for proactively refactoring two legacy service modules before handoff.	

Projects

MindCare - AI-Powered Mental Health Monitoring Platform	Ongoing
Tech: MongoDB, Express, React, Node, Redis, NLP, RAG, JWT	[GitHub]
- Built a 4-module AI platform (mood log → NLP analysis → risk scoring → recommendations), with a pipeline that classifies emotional risk into 4 tiers for near real-time feedback. - Added a RAG recommendation layer that grounds suggestions in a curated knowledge base, so responses stay contextual instead of generic model output. - Introduced Redis caching across role-based dashboards and a JWT + RBAC multi-tenant architecture, reducing repeat database load and enforcing strict data separation between roles.	
Airtasker - Service Marketplace Platform	Ongoing
Tech: MongoDB, Express, React, Node, JWT, REST APIs	[GitHub]
- Started during the Teal Feed internship; continued as an independent contributor, actively maintained and extended. - Built a 3-role MERN marketplace (task posting, provider bidding, admin review), designing REST APIs for authentication, task lifecycle management, and bid handling, secured with JWT and role-based middleware. - Optimised MongoDB aggregation queries powering real-time task-status updates, measurably reducing average response time on task-listing endpoints in local benchmarks.	
Zomato-Style Food Delivery Application	Jun 2024 - Nov 2024
Tech: MongoDB, Express, React, Node, Cloudinary, JWT	[GitHub]
- Delivered a 2-dashboard (User / Admin) MERN platform solo, covering menu management, cart, live order tracking, and a Cloudinary-backed media pipeline. - Implemented JWT authentication across REST APIs with role-based access checks, plus an admin batch-upload flow using Cloudinary auto-optimised images.	

Certifications & Achievements

- Solved 100+ Data Structures and Algorithms problems on LeetCode, spanning arrays, trees, graphs, and dynamic programming. Cisco Networking Academy: Introduction to Modern AI, Data Analytics Essentials, and Apply AI: Analyze Customer Reviews - covering AI/LLM fundamentals, analytics tooling (Excel, SQL, Tableau), and applied LLM workflows.
